Ditiscetin alpha chain - puff adder
NiAlternate names: von Willebrand factor modulator protein
NiAlternate names: von Willebrand factor modulator protein
C;Species: Bitis arietans (puff adder)
C;Date: 31-Jan.1997 #sequence_revision 31-Jan.1997 #text_change 12-Feb-1999
C;Date: 31-Jan.1997 #sequence_revision 31-Jan.1997 #text_change 12-Feb-1999
R;Matsui, T.; Hamako, J.; Suzuki, M.; Hayashi, N.; Ito, M.; Makita, K.; Fujimura, Y.; Oz submitted to JIPID, January 1997
R;Description: Complete amino acid sequence of bitiscetin, a novel von willebrand factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Molecule type: protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A; Molecule type: protein
A; Mesidues: 1-123 < PENA
A; Residues: 1-123 < PENA
A; Residues: 1-123 < PENA
C; Comment: This protein inhibits agglutination of fixed platelets induced by several platibrand factor and alboaggregins.
C; Superfamily: tetranectin; C-type lectin homology
C; Keywords: anticoagulant; dimer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            C;Species: Echis carinatus (saw-scaled viper)

-!- FUNCTION: Two-chain Botrocetin forms an activated complex with VF, and the complex then binds to platelet GPIb, resulting in platelet agglutination.
-!- FUNCTION: There are two distinct forms of the von Willebrand factor-dependent platelet coagglutinin. The dimeric form is 34-times more active than the one-chain Botrocetin in promoting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1; Gaps

                                                                                                                                                                           'WF binding to platelets.
-!- SUBUNIT: Disulfide-linked dimer of an alpha and a beta chain.
WF and Botrocetin form a soluble complex.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Contains 1 C-type lectin family domain.

Thromb. Haemost. 79:609-613(1998).

Thromb. Haemost. 79:609-613(1998).

-!- FUNCTION: Binds to platelet GPIb/IX receptor system and stimulates agglutination.

-!- SUBUNIT: Heterodimer of alpha and beta subunits, disulfide-linked.

-!- SUBUNIT: Heterodimer of alpha and beta subunits, disulfide-linked.

-!- SUBUNIT: Heterodimer of alpha and beta subunits, disulfide-linked.

-!- SIMCARITY: Contains 1 C-type lectin family domain.

"Cloning of subunits of convulxin, a collagen-like platelet-
aggregating protein from Cotalus durissus terrificus venom.";
Biochem. J. 333:389-393(1998).
-!- FUNCTION: Binds to the platelet and collagen receptor,
glycoprotein VI (GPVI).
-!- SUBUNIT: Heterohexamer of three alpha chains and three beta
chains; disulfide-linked.
-!- SIMILARITY: Contains 1 C-type lectin family domain.

"Rhodocetin, a novel platelet aggregation inhibitor from the venom of Calloselasma rhodostoma (Malayan pit viper): synergistic and noncovalent interaction between its subunits.";
Biochemistry 38:7584-7593(1999)
-!- FUNCTION: A potent inhibitor of collagen-induced platelet aggregation. Individually, neither subunit inhibits platelet.
-!- SUBUNIT: Hererodimer of one alpha and one beta subunit held together by noncovalent interactions rather than by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by intersubunit displaced by i
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- SUBCELLULAR_LOCATION: Secreted.

Biochem. J. 333:389-393(1998).
-!- FUNCTION: Binds to the platelet and collagen receptor,
glycoprotein VI (GPVI).
-!- SUBUNIT: Heterohexamer of three alpha chains and three beta chains; disulfide-linked.
-!- SIMILARITY: Contains 1 C-type lectin family domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         vWP, and the complex then binds to platelet GPIb, resulting in platelet agglutination.

-!- FUNCTION: Two-chain Botrocetin forms or platelet GPIb, resulting in platelet agglutination.

-!- FUNCTION: There are two distinct forms of the von Willebrand factor-dependent platelet coagglutinin. The dimeric form is 34-times more active than the one-chain Botrocetin in promoting vWF binding to platelets.

-!- SUBBUNIT: Disulfide-linked dimer of an alpha and a beta chain.

Brinding of a novel 50-kilodalton alboaggregin from Trimeresurus
T. Blodabris and related viper venom proteins to the platelet membrane
T. Glycoprotein Ib-mediated platelet activation.";
Blochemistry 35:12629-12839(1996).
T. FUNCTION: Blinds to platelet GPiBLIX receptor system, inhibits VWF
Dinding, and stimulates agglutination.
T. SIBUNIT: Hererodimer of alpha and beta subunits; disulfide-linked.
T. SIBUNIT: Hererodimer of alpha and beta subunits; disulfide-linked.
T. SIBURILALIAR LOCATION: Secreted.
T. SIMILARITY: Contains I C-type lectin family domain.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Organ: venom glands; Vector: pGEMILIZ+; Site_l: Eco
RI; Site_2: Not I; Sug of mRNA from Bothrops insularis
venom glands were primed with Oilgo-(dr) and reverse
transcribed to cDNA using Superscript Plasmid System for
cDNA Synthesis and Cloning (LifeTechnologies). The cDNAs
were selected by size (350-600 pb and up 600 pb) in
agarose gel electrophoresis, linked to Eco RI adapters and
directionally cloned in pGEMILIZ+ vector (Promega). ESTs
were generated from random clones and grouped in unique
sequences. The putative identification of each EST or
cluster was obtained through Blast searches (e-value <
